Notes: Seven items were used to assess the temperament of the *PFL* child. Specifically, the mother was asked questions related to how well her baby behaves and was instructed to answer each item on a zero to six point scale. These seven items ( $\alpha = .68$ ) were taken from the Quebec Longitudinal Study of Child Development (QLSCD) and are originally based on the Infant Characteristics Questionnaire (Bates, Freeland, & Lounsbury, 1979). Scores to each item were summed providing a total possible range of zero to 42, with higher scores indicative of more difficult child temperament.

Notes: *Edinburgh Postnatal Depression Scale* (EPDS; Cox, Holden, & Sagovsky, 1987) is a 10-item ( $\alpha = .93$ ) measure completed by the mother when the *PFL* child is six months old. The EPDS is designed to identify women who are at risk of depression. Mothers were asked to tick the option that best represents how she had been feeling over the previous seven days. The four responses to each question were rated on a zero to 3 point scale with higher scores indicating a greater likelihood of depression. The total score obtained represents the sum of all responses and has a range of zero to 30.

Notes: Derived from survey 27(e27) I know it is sometimes hard to give an exact figure for income, but could you please think about your household's take home income in the last 12 months. Over this time, what is your best guess of the household's average total income per *week*, this is the take-home family *weekly* income from all sources and includes social benefits for all people living in your household? This includes wages and salaries, income from self-employment, dividends and interest, unemployment insurance or the dole, worker's compensation, government pension, child benefit, child support, and all other sources. Please use CARD 43 to choose the weekly income range that best applies to your household.

Notes: For the SERV\_ variables 'Yes' and 'No' indicate whether a respondent has used at least one of the listed services per service type (for example Emergency Services). Response to individual service type (for example Childline) has not been supplied in the archived file due to the sensitive or identifying nature of some of these services and the very small cell size for most individual services.
