General & Physical Chemistry																		Inorganic Chemistry																						50 Programme credits 10 Elective credits															
Physics in Medicine																		Organic Chemistry																																					
Basic Principles of Cell Biology																		Basic Principles of Genetics																																					
Healthcare Imaging & Information Systems																		Physics II Medical Science																																					
Medical Zoology																		Science Medicine & Society																																					
STAGE 1																																																							
The Molecular Basis of Life																		Cardiac Biology																						50 Programme credits 10 Elective credits															
Clinical Science & Healthcare Informatics1																		Vascular Biology																																					
Basic Tissue & Early Development of the Body																		Respiratory Biology																																					
Cell-Cell Communication & Signalling																		Renal Biology																																					
Musculoskeletal Biology																		Personal & Population Health																																					
STAGE 2																																																							
Locomotor Biology																		Genetics, Perinatal & Pediatric Diseases																						50 Programme credits 10 Elective credits															
Gastrointestinal Tract & Liver Biology																		Principles of Infection & its Treatment																																					
Endocrine Biology																		Understanding Disability for Healthcare students																																					
Neurosciences																		Oncology & Immunopathology																																					
Mechanisms of Disease																		Cardiovascular & Renal Diseases																																					
STAGE 3																																																							
GI/Hepatobiliary Diseases																		Professional Clinical Practice																						55 Programme credits 5 Elective credits															
Haematology/Immunosuppresion																		History Taking & Communication																																					
Central Nervous System Diseases																		Physical Examination & Clinical Procedures																																					
Respiratory Disease																		Reproductive, Psychological Medicine & Child Health																																					
Endocrine Diseases																		Clinical Diagnosis & Therapeutics																																					
																		Otolaryngology/Ophthalmology																																					
STAGE 4																																																							
Medicine 1																Surgery part A		Forensic & Legal Medicine		Medicine 2																Surgery part B		Psychiatry		Medicine & the Community		65 Programme Credits													
Surgery part A																Medicine 1				Surgery part B																Medicine 2		Obstetrics & Gynaecology		Paediatrics															
STAGE 5																																																							
Obstetrics & Gynaecology																Paediatrics		Public Health Medicine		Medical Elective																Professional Completion Module: Medical elective, Subinternship, Clinical emergencies, Independent study, Intensive revision.		55 Programme Credits																	
Psychiatry																Medicine & the Community																																							
STAGE 6
