Partnerships in Urban Property Development

This book covers partnerships in the broadest sense, presenting a critical account of the whole range of partnerships in property development.

The emphasis is on the relationship between developers and landowners, developers and funders, and the provision of public services through the use of private finance.

The authors draw on their own professional experience of running property partnerships and, with carefully researched case studies, present the ‘insider’ view, making a potentially dry and complex subject accessible and lively.

The book moves beyond a theoretical overview and, by illuminating the reality of property partnerships shows for example, exactly how the government is procuring schools, hospitals and roads.

This clear and objective analysis sets property partnerships in their economic and political contexts and will be of topical interest to surveyors and developers – in both private practice and local authorities – as well as to funders. Students in surveying, estate management and real estate development will also find this a concise and authoritative guide.

Property Investment Appraisal
3rd Edition
Andrew Baum and Neil Crosby

This book explains the process of property investment appraisal—estimating both the most likely selling price (market value) and the worth of property investments to individual or groups of investors (investment value).

In a style that makes the theory as well as the practice of valuation accessible to students and practitioners, the authors provide a valuable critique of conventional valuation methods and argue for the adoption of more contemporary cash-flow methods. They explain how such valuation models are constructed and give useful examples throughout.

Property Valuation
In an economic context
Peter Wyatt

This book focuses on the valuation of commercial and industrial property across investment, development and occupier markets—these three sectors are interrelated and their analysis forms the backbone of the textbook.

It is structured from the clients' perspective—investors, occupiers and developers—an focuses on single-asset pricing, risk and return issues. The author considers valuation from the standpoint of market participants because they are responsible for commissioning valuations.

Property Valuation—In an economic context introduces valuation activities from a broad economic perspective and combines its academic and practical roots. With extensive use of examples the book provides, in a single text, all that postgraduate students need on valuation courses. Its user-friendly and accessible format, using tried-and-tested teaching and learning devices and a clear writing style, makes it equally accessible to undergraduate students and comes with an accompanying website.
