*2015-2020 5-Year Data
Introduction

It is a pleasure to introduce the UCD School of Medicine Research report for the 2019/20 academic year which highlights the achievements from what has been a challenging year for our school. Our faculty, researchers and students have continued to explore research questions of fundamental importance to human health and disease.

Despite the impact of the Covid-19 pandemic, our schools research profile has continued to expand with noticeable increases in funding success across the school. The growing impact of our research is evidenced by the high quality publications arising, which have enabled strong growth in our Field Weighted Citation Index to 1.78.

The investigator base at the School has also grown significantly this year, mainly through the Ad Astra programme, adding additional research focus which will impact our students, our school and our community for many years to come.

This report also details some of the research support initiatives commenced this year and plans for the future, that are aimed at enabling our investigators, creating a supportive research culture and maximising the impact of our research.

Despite the challenges of the past academic year, our research teams have risen to the challenge and have continued to conduct high quality research that is impacting patients and society. I look forward to continuing to work with our school, to maximise our research impact.

Prof Peter Doran

Associate Dean Research, Innovation and Impact

UCD School of Medicine
Research Highlights

Prof Catherine Godson was honoured by the International Association of Inflammation Societies (IAIS) in recognition of ‘outstanding research and leadership contributions’ and was presented with the Women in Science award at the 14th World Congress on Inflammation.

Under the leadership of Prof Owen Smith, a group of haematology experts from across Europe meet in Dublin on 7th and 8th October 2019 to finalise a new clinical protocol for the treatment of acute lymphoblastic leukaemia, the commonest cancer in children.

In the largest ever study of the genetics of diabetic kidney disease (DKD), Researchers in the UCD Diabetes Complications Research Centre and their international collaborators identified 16 regions of the human genome linked with DKD, the leading cause of kidney disease that can end in organ failure.

Prof Ed McKone was co-author of two major publications in the New England Journal of Medicine reporting two Phase III clinical trials evaluating a triple-drug combination therapy in the treatment of patients with cystic fibrosis.

Together with international colleagues the UCD Centre for Arthritis Research characterised and named a gene. The team demonstrated that MACIR, the macrophage immunometabolism regulator gene was important in balancing inflammatory response and the resolution of inflammation.

Prof Walter Kolch and Dr David Gomez led the UCD Systems Biology Ireland participation in the €80 million 4-year 3TR initiative which is a large Innovative Medicine Initiative 2 Immunology projects that aims to improve disease management of non-responders to therapy across seven immune-mediated diseases.

Dr Eoin Cummins organised a successful international conference on carbon dioxide signalling. The meeting on ‘Carbon Dioxide Detection in Biological Systems’ explored common themes of carbon dioxide sensing between plant and animal kingdoms as well as clinical challenges posed by hypercapnia.

Researchers at the UCD Centre for Human Reproduction published the results of a large longitudinal observational study examining changes in body mass index (BMI) of mothers between successive pregnancies.

Prof Catherine Godson was elected Science Secretary of the Royal Irish Academy in April 2020

Prof Oliver Fitzgerald, was recognised by rheumatology peers internationally and awarded the Verna Wright Prize 2020.
An international research consortium, including Prof Alistair Nichol published a major study comparing different stress ulcer prophylaxis strategies in mechanically ventilated patients within intensive care units.

Researchers at the School, including Dr Eoin Cummins and Prof Cormac Taylor published a review article in the leading physiology journal on oxygen and carbon dioxide sensing in mammals. The review was further highlighted for attention on the cover of the prestigious Physiological Reviews journal.

Led by Prof Donal Brennan, a ground-breaking initiative to support women who are struggling with the life-changing side effects of cancer treatment was launched with nurse-led pilot clinics in Dublin and Cork. The Irish Cancer Society-funded project is part of the Women’s Health Initiative focus on cancer survivorship.

UCD School of Medicine investigators, researchers and students respond to the Covid-19 crisis by supporting testing, delivering training, providing PPE and reagents and leading major research programmes, including clinical trials.

Prof Walter Cullen and colleagues highlighted the wider implications for mental health of the covid-19 pandemic in the Quarterly Journal of Medicine.

Prof Carel le Roux led the SOPHIA (Stratification of Obese Phenotypes to Optimize Future Obesity Therapy), a new €16 million EU and industry supported international research consortium which was launched in early summer 2020.

Dr Jaythoon Hassan (UCD National Virus Reference Laboratory) who was the Winner of this year’s Laboratory Scientist of the Year Award at the Irish Laboratory Awards. This award recognised her contribution to innovation, leadership and research, at both a national and international level.

A research team at the School of Medicine, led by Prof Cormac McCarthy and Prof Paddy Mallon demonstrated that sub-set of critically unwell COVID-19 patients in St Vincent’s University Hospital (SVUH) responded to treatment with tocilizumab and avoided need for mechanical ventilation.

Led by Prof Kirsten Shaffer, a UCD School of Medicine Research Team used genome sequencing approaches to demonstrate the dynamics of COVID-19 transmission occurs between Healthcare Workers (HCWs) and patients.
Research Support Initiatives

2019/20
Throughout the last academic year, the school has implemented a number of initiatives aimed at supporting our key objectives of developing a supportive research environment and enhancing our research activity.

Maximising the impact of published research via structured communications support

In September 2020, Prof Peter Doran, Prof Cormac Taylor and the School’s Marketing and Communications team, Jane Curtin and Stephen Pigott developed a route for communicating the research success of the School. Through the provision of targeted communications support, we are ensuring that our highest impact research is receiving the internal and external attention it merits. This programme has led to a number of high profile print and broadcast media outputs, which showcase the research strength of our school.

School grant advisory

In August 2020, the School launched a new Grant Advisory function which has been established to provide information and feedback to School staff who are preparing grant proposals. This initiative, developed by Dr Eoin Brennan and Dr Carol Aherne, is designed to complement existing UCD Research supports and is chaired by Prof Walter Kolch. The School is confident that the establishment of this function will be a significant resource for School staff and we encourage all applicants to engage with the process.

Graduate Research Association of Medicine (GRAM)

The Graduate Research Association of Medicine (GRAM) launched on Zoom on the 27th of October 2020, where students were welcomed to the School by the Associate Dean for Research, Innovation and Impact, Professor Peter Doran, and our Postgraduate Research Advisor, Ms. Carita Bramhill.

GRAM is for graduate researchers who are linked to the School of Medicine whether they be completing a M.Sc., Ph.D., or M.D. The association is run by graduate researchers and made possible through funding by UCD, School of Medicine.

The aim of GRAM is to provide a supportive network and improve the experience of graduate researchers throughout their years in UCD. To do this, GRAM will be hosting various events throughout the year including orientation, academic careers day, social lunches and the sharing of graduate research news through a monthly newsletter.
Return to research funding

The School of Medicine is committed to supporting members of Academic Staff who are returning from an extended period of leave connected with caring or illness to reactivate their research and launched an initiative this year to support these staff. The research grant for returning academic staff can be drawn down on return from leave and is available to staff returning from maternity / adoptive leave, and to any research active academic returning from unpaid carer’s/parental leave or sick leave. The grant will be allocated on the basis of a short application, supported by the Head of School, the Associate Dean for Research, Innovation and Impact and the chair of the School EDI committee. We encourage all eligible staff to apply.

School of Medicine Research Office

The School provides considerable financial and organisational support to our investigators and their teams to allow them compete for external research funding.

As part of the current School of Medicine Research Strategy, the School has assembled and continues to develop a coherent set of supports to assist high calibre groups of investigators achieve their full potential. The UCD School of Medicine Research office has been developed to act as a central hub to connect our dispersed group of investigators to practical University support for grant writing, programme management, industry liaison and international collaborations. It also offers support to graduate students and to research-Graduate committees such as the School of Medicine Clinical and Biomedical Research Degree committees, and the Summer Student Research (SSRA) Programme. The UCD School of Medicine Research office is led by Yvonne Barry, Research Administration Manager, and supported by Niamh McCarthy, Senior Administrator-Admin Support Team and Edward Moore, Senior Administrator-Admin Support Team. Central to the functions of the office is rapid and effective communication with our investigators and students. This function is supported by the School of Medicine communications team, who have worked closely with the research office to support initiatives across the school.
Translational Research Advisors

To support the development of the schools strategy, the Associate Dean for Research Innovation and Impact has created a number of Translational Research Advisors roles. This group is charged with advising on the research supports at the school.

- Dr Kathleen Curran
- Dr Neil Docherty
- Dr Jeffrey Glennon
- Dr Marie-Louise Ryan
- Dr Deborah Wallace

Research Integrity Champion

- Dr Steven Thorpe

School Research Ethics Committee

- Assoc Prof John Baugh (Chair, Taught Graduate Programmes - Physiology, BSc Physiology)
- Dr Christine Costello (BSc Physiology)
- Dr Dearbhaile Dooley (Anatomy subject)
- Dr Sean Ennis (Biomedical Sciences)
- Dr Rachel Toomey (Radiography)
- Dr Michaela Davis (Radiography)
- Dr Noreen Sheehy (SSRA programme)
- Prof William Watson (Programme Director - BHLS)
- Prof Walter Cullen (Taught Graduate Programmes – Primary Care & General Practice)
- Dr Marie-Louise Ryan (Taught Graduate Programmes - Radiography)
- Mr Asim Sheikh (Taught Graduate Programmes - Legal Medicine)
- Dr Valerie O’Brien (Taught Graduate Programmes - Psychotherapy)
- Dr Marina Everri (Taught Graduate Programmes - Psychotherapy)
- Dr Barry O’Donnell (Taught Graduate Programmes - Psychotherapy)
School Research Innovation and Impact Group (RIIG)

The RIIG has been established to provide strategic oversight of activities, systems and supports for research in the School of Medicine and to support our ambition to be an international leader in biomedical and clinical research. The RIIG has a major role in promoting the school’s research community and in developing a culture and environment conducive to conducting research within the school.

IN FOCUS...

Systems Biology Ireland (SBI)
www.ucd.ie/sbi

Systems Biology Ireland was founded in 2009 through a Science Foundation Ireland (SFI) CSET grant, and has been consistently ranked amongst the top five systems biology research centres in the world by international review panels in 2014, 2016, and 2018. The purpose built SBI facility on the UCD Belfield campus sits between the UCD Health Sciences Centre and the UCD Conway Institute providing easy access to modern omics technology platforms. It combines dry and wet experimentation under one roof, and houses a multidisciplinary team of some 60 researchers from over 20 nations including computational scientists and modellers, biologists, biochemists and clinician-scientists. Together these researchers have published 3-4 papers per month since the centre’s inception in 2009. SBI uses mathematical and computational modelling approaches in combination with cutting edge experimental technologies to acquire a systems level, mechanistic understanding of cellular signal transduction networks. In recent years SBI has focused on applying the computational modelling tools it generates to develop precision medicine approaches.

Publication highlights

- Forde S, ... Smith O, ... Turner SD. Paediatric Burkitt lymphoma patient-derived xenografts capture disease characteristics over time and are a model for therapy. *Br J Haematol.* 03 Sept 2020

Key appointments

SBI principal investigator, Professor Owen Smith was appointed National Clinical Lead for Child, Adolescent & Young Adult Cancers for the National Cancer Control Programme based on his contribution to formulating the policy for this group in the current Cancer Strategy.
IN FOCUS...

Charles Institute of Dermatology
www.ucd.ie/charles

Education

The Institute established the bi-weekly Charles Seminar Series by skin/dermatology research leaders in Ireland and abroad. Aided by unrestricted educational grant from A Menarini. Audience as in-house and online streaming via Adobe Connect (to Irish Dermatologists). Seminars written up by medical journalist as short synopses in Medical Independent, under ‘Charles Institute’ banner. 23 talks in 1st session; Ire (8); UK (12); Ger (1); Swiss (1); Spain (1).

The institute launched and enrolled over 100 students on the UCD Professional Certificate in Clinical Dermatology, supported by over twenty of Ireland’s leading consultant dermatologists from all four provinces (emphasizes CI’s all-island resource).

Research Highlights

• Full-time core PIs (Wenxin Wang/Des Tobin); associated PIs (Frank Powell, Christina Kiel/SBI, Brian Kirby).
• 1 Technical Officer and 1 SEA (latter post recently confirmed for 5 years)
• At highest during this academic year there were PhD students (17) with 8 graduations; Postdocs (14).
• Honorary Visiting Staff (Prof. Alan Irvine) and alignment of UCD Clinical Pathway dermatologists with CI.
• Externally-funded grants in 2019/2002 from HEA, EU, IRC, SFI, EI (DTIF), Industry, CDSCHC, Newman Fellowships. Projects attracted >€4.8M.
• Separate 5-year award (€3M) from CDSCHC to form an Irish skin disease patient registry (called NISR; board of directors Alan Irvine, Des Tobin, Fiona Browne). Recently obtained charity status (#420205667). Operational address UCD Charles Institute.
• Publication highlights: >40 papers. 21 papers in Journals with impact factor >6 [incl. Lancet 59.01; Nat Rev Chem 30.63; J Pineal Res 15.2; Mater Horiz 13.1; Nat Comm 11.88; Biol Rev Camb Phil Soc 10.71; ACS Appl Mat Interf 8.75; JID 714; JAAD x3, 73; BJD x7 6.7; GigaSci 6.95; Acta Biomater 6.64.
The Student Summer Research Award (SSRA) programme, established in 2006 under the direction of Professor Amanda McCann, is a research based initiative to support and showcase undergraduate research affiliated with the UCD School of Medicine.

The overarching aim of this eight-week programme is to provide undergraduate healthcare students with opportunities to undertake research at an early stage in their degrees, with a view to fostering a passion for enquiry, discovery, innovative and potentially translational research. These 8-week summer research projects result in published conference proceedings and in many cases full peer reviewed publication.

This year, the UCD School of Medicine had a particularly challenging environment with the ongoing COVID-19 pandemic. Despite setbacks, a strong research ethos triumphed and we have continued to instil in our undergraduate an appreciation for the importance and relevance of research to medicine and indeed inspire some of them to consider a career as a clinical scientist.

103 students undertook SSRA projects in 2020, including a number of students who were hosted virtually in International Institutes including the University of Texas, nine institutes across Canada, the University of Minnesota, Dana-Farber Cancer Institute, The Cancer Institute of Japanese Foundation for Cancer Research and the Institute of Biology Valrose (iBV), Université Côte d’Azur, Nice France. This is testament not only to the support of UCD alumni around the world but also to the incredible links that our students have made with International hosts and the great flexibility explored to host UCD students in remote working capacities.

SSRA Scholarships in 2020 were limited due to travel restrictions. However thanks to the generosity of the benefactors of the Myles Smith family, the UCD School of Medicine SSRA programme was able to continue to offer the Award for Research Excellence in 2020 in the areas of cardiology and vascular disease and rare cancers.
Awards

Alfred Myles Smith Bursary 2020: Kathryn L Hong
Project Title: Transforming the assessment of cardiac fibrosis in patients with atrial fibrillation
Location: Division of Cardiology, Schulich Heart Centre, Sunnybrook Health Sciences Centre, Toronto ON, Canada
Supervisor: Dr Benedict M Glover

Gold Medal - Katherine Ketchum
Project Title: Pain detectives: optimizing the management of pain and irritability in children with severe neurological impairment
Location: British Columbia Children’s Hospital Research Institute, Vancouver, Canada
Supervisor: Dr Hal Siden

Silver Medal - Brigid Kemerer
Project Title: The Impact of Covid-19 on mental health presentations to Temple Street Children’s University Hospital Emergency Department
Location: Department of Liaison Psychiatry, Children’s University Hospital, Temple Street, Dublin, Ireland
Supervisor: Dr Ian McClelland

Bronze Medal - Kai Ning Chiam
Project Title: Analysis of retinoic acid receptor gene regulation in ametastatic pancreatic cancer cell line
Location: Systems Biology Ireland, University College Dublin
Supervisor: Dr Stephen Thorpe

Poster 1st Place - Marianna Nachef
Project Title: Enhancing anti-tumor immunotherapy by targeting the amino acid transporters slc1a5 and slc3a2/slc7a5
Location: Department of Biochemistry, Microbiology, and Immunology, Faculty of Medicine, University of Ottawa, Ottawa, ON, Canada
Supervisor: Dr Seung-Hwan Lee

Poster 2nd Place - Marcelina Szewc
Project Title: Biological methods for the control of gastrointestinal nematodes
Location: UCD Veterinary Sciences, University College Dublin
Supervisor: Dr Annetta Zintl

Poster 3rd Place - Halin Buruno
Project Title: Can the collapse of the scalp hair follicle pigmentary unit with age (canities) provide insights into how melanocyte death could be induced in melanoma?
Location: UCD Charles Institute of Dermatology, University College Dublin
Supervisor: Prof Desmond Tobin

• UCD Centre for Emergency Medical Science
• UCD Centre for Arthritis Research
• UCD Centre for Precision Surgery
• UCD Bioinformatics Centre
• UCD Academic Centre on Rare Diseases
• UCD Diabetes Complications Research Centre
• UCD Centre for Experimental Pathogen Host Research
• UCD Centre for Human Reproduction
• UCD Perinatal Research Centre
• UCD Centre in Translational Oncology
The UCD Centre for Emergency Medical Science (CEMS) was established in 2001 to provide a national centre of excellence for research, development, education and training in pre-hospital emergency care. The principal activities of UCD-CEMS are provision of graduate and undergraduate education and training in pre-hospital immediate care. Provision of short courses in immediate care - including cardiac, trauma and paediatrics. Management and delivery of the MERIT Project (Medical Emergency Responders: Integration &amp; Training). The work of statutory ambulance services and GPs in caring for acute, serious illness and injury in the community is the principal focus of UCD CEMS.

**Centre news in 2020**

In response to a request from the HSE, UCD CEMS delivered 600 training places to GPs and GP Registrars in Clinical PPE Emergency Care in April-September 2020.

Our centre has proven highly successful in developing translational experimental approaches including training and performance of mini-arthroscopy and tissue biopsy. The programme based across the UCD Clinical Research Centre, provides whole tissue biopsy explant cultures for research that is an entirely unique resource. Our teams’ ability to perform this research has led to both academic and industry collaborations attracting significant non-exchequer funding from both the EU and the US. The expertise for this highly developed research programme has led to novel translational research outputs including presentations at the highest quality international research meetings and publication in high impact factor peer-review journals.

**Key Grants in 2020**

- Daire O’Leary awarded a Newman Fellowship in Paediatric Rheumatology

The UCD Centre for Precision Surgery, established 2019, is an applied research, education and training facility dedicated to excellence in surgery and the future of healthcare. The Centre’s purpose is to respond to the global imperative to optimise patient safety and clinical outcomes through tangible advancements in surgical research and in the training of the current and next generation of surgeons.

**Key Awards in 2020**

- Shortlisted at the 2020 Irish Healthcare Awards for:
  - UCD Centre for Precision Surgery (Surgical Advancement of the Year category)
  - AEROSOLVE (Best Response to COVID-19 category)
- UCD Research Awards Shortlist: Dr Kevin Nolan.

**Key Grants in 2020**

- PORSAV: industry partnership in development and testing of powered air respiratory protection systems in the operating theatre, and better surgical tools. A Horizon 2020 award, total project €2.6M
There is an amazing diversity and quantity of information (with increasingly complex linkages) emerging in the biological and medical sciences. Bioinformatics is the use of computational approaches to make sense of biology, especially to analyse molecular sequences of DNA, RNA and protein.

The UCD Bioinformatics Centre is focused on advancing the quality of bioinformatics science. It supports academic researchers working in the areas of bioinformatics, genomics and molecular evolution. It encourages interdisciplinary collaborations inside and outside UCD through PhD programmes, teaching and software provision. Key areas include sequence alignment, molecular evolution, short peptides, protein structure prediction, cancer, pathogens.

**Key Awards in 2020**

- Key grants to researchers include SFI Frontiers awards to Geraldine Butler and Emma Teeling, and a Careerfit EI/Marie Curie fellowship to Denis Shields group.

**Centre news in 2020**

6 PhD students have joined UCD this year to start Jan 2021 as part of the SFI CRT in Genomics Data Science (2 in Medicine (Bond and Shields groups), 2 in SBES (Hughes and Johnston groups), 2 in computer science (Ryan and Pollastri groups), joining the three who joined last year (SBBS, SBES, SAFS).

UCD (also representing affiliates NUIG and UCC) signed the final agreement with Elixir to formalise Elixir Ireland centred in UCD as a bioinformatics node linking in to the Elixir organisation across Europe to support bioinformatics services. This is supported by an EU consortium grant (CONVERGE, local PI Colm Ryan, computer science, Deputy Director of Elixir Ireland).

The UCD Academic Centre on Rare Diseases (ACoRD) was awarded formal centre status in June 2013. The focus of the centre is to investigate rare genetic diseases, particularly those affecting the Irish population and the Irish Traveller population.

The Centre’s aims are focused on the study of rare genetic diseases, with a view to the identification of the mutation(s) causing the disease. Once a causal mutation(s) is established, the objective is to develop diagnostic tests for translation back into a clinical setting. Once a gene is implicated, our PIs work to further investigate the gene function and biological pathways involved in the condition. The ultimate aim is to investigate those conditions / genes which might be amenable to drug targeting or gene therapy.

Rarely in a lifetime does a scientific or medical field of research ‘come of age’. The revolution that was the ‘Human Genome Project’, coupled with the latest technological advances in genomics is set to transform the field of rare genetic diseases. An ad hoc group of UCD based clinicians, scientists, specialists in bioinformatics and cell biologists have long since recognised these developments, and the rare disease group – prior to its establishment as a centre – has achieved considerable national and international recognition.
The UCD Diabetes Complications Research Centre (DCRC) focuses on the macro and microvascular complications of diabetes and obesity.

We comprise a multidisciplinary research group with expertise in molecular cell biology, genetics, bioinformatics, pharmacology, systems biology, chemical pathology and clinical medicine. Investigators are based in the UCD Conway Institute, the Mater Misericordiae University and St Vincent’s University Hospitals and work closely with international collaborators in academia and industry. Research programmes are funded by national and international sources including Science Foundation Ireland (SFI), The European Union, Wellcome Trust, the National Institutes of Health (NIH), the Juvenile Diabetes Research Foundation (JDRF), European Renal Association (ERA), European Association for the Study of Diabetes (EASD), the European Union (EU), Innovations Medicine Initiative (IMI) and bio pharma industry.

Achievements of UCD DCRC PIs within the SoM

Prof Catherine Godson

- Elected as Science Secretary for the Royal Irish Academy, 2020.
- The Academy is an all-island independent forum of peer-elected experts, which draws on Members’ expertise to contribute to public debate and policy formation on issues in the sciences and humanities and promotes awareness of how science and the humanities enrich our lives and benefit society.
- Barts Charity is one of the biggest medical charities in the UK. It supports the staff and researchers at The Barts Health group, serving a population of 2.5 m; and the allied London School of Medicine and Dentistry, Queen Mary University of London.
- Featured Researcher in RCSI SMJ 2020
- Chair RIA Webinar, 2020
- We are all virologists now: The Science of COVID-19
- Appointed Adjunct/Visiting Professor at Monash University, Melbourne, Australia, 2020.

The Atlas of Inflammation Resolution (AIR) is a web-based resource capturing the state-of-the-art in acute inflammation and inflammation resolution research. The AIR provides an interface for users to search thousands of interactions, arranged in interconnected multi-layers of process diagrams, covering a wide range of clinically relevant phenotypes. The AIR serves as an open access knowledgebase, including a gateway to numerous public databases. It is furthermore possible for the user to map experimental data onto the molecular interaction maps of the AIR, providing the basis...
for bioinformatics analyses and systems biology approaches. By mapping experimental data onto the Atlas, it can be used to elucidate drug action as well as molecular mechanisms underlying different disease phenotypes. Altmetric Impact score 14. High Attention Score compared to outputs of the same age (85th percentile).

This is a major contribution as it identifies a mutant in Colv4a3 protein whose expression is associated with altered susceptibility to DKD. Impact Factor 9.27, Citations 23, Altmetric Impact Score 92. High Attention Score compared to outputs of the same age (97th percentile).

**Prof Carel le Roux**

  This impacted on new guidelines to prioritize patients with obesity and diabetes for treatments such as metabolic surgery.

  www.youtube.com/watch?v=sodbAtmb9D4&feature=youtu.be

- Innovative Medicine Initiative (European Union). 2020-2025. Stratification of Obese Phenotypes to Optimize Future Obesity Therapy. €16,000,000 (Lead Coordinator)

  Twenty-nine leading international players from academia, industry and civil society have joined forces to find better solutions to alleviate the burden and consequences of obesity. The project is supported with funding of € 16 million from the Innovative Medicines Initiative (IMI), a joint undertaking of the European Commission and the European Federation of Pharmaceutical Industries and Associations (EFPIA), T1D Exchange, JDRF, International Diabetes Federation (IDF), and Obesity Action Coalition.

  Carel was ranked by Expertscape.com as the world’s top clinician scientist in the field of “bariatric surgery” as well as for “morbid obesity”.

  The journal “Obesity Surgery” featured the biography of Carel le Roux in their June 2020 edition as one of the thought leaders who have moved the field forward.

  During the Covid-19 epidemic treatments were stopped for patients with obesity, diabetes and chronic kidney disease. Carel was approached to contribute as part of a highly respective international panel to guide current and future prioritisation of patients. He was able to use his research to convince the consortium that patients with obesity, diabetes and chronic kidney disease need to be prioritised during the Covid-19 epidemic and thereafter. Impact factor: 25, citations 20, Altmetric Impact score 146. High Attention Score compared to outputs of the same age (97th percentile).

**Assoc Prof Neil Docherty**

  Based on their recent high impact research studies and recognising their role as leading experts in the field, Neil and Carel were commissioned by Nature Reviews Nephrology to complete this state-of-the-art review. The paper is a comprehensive synthesis of the evidence base to date on the emerging prominence of bariatriic surgery as a treatment option in patients with obesity, diabetes and associated kidney injury. Impact Factor 20, Citations 5, Altmetric Impact Score 20- High Attention Score compared to outputs of the same age (88th percentile)
Established in 2008, CEPHR (formerly the HIV Molecular Research Group, HMRG) is internationally recognized for its translational research into long-term co-morbidities associated with HIV infection and its treatment with antiretrovirals and research into models of testing to increase early diagnosis of HIV.

The CEPHR, based on the Mater Misericordiae University Hospital (MMUH) campus, coordinates international, collaborative, translational research in HIV. The group comprises researchers with laboratory, statistical and clinical research expertise and is funded through a number of streams including Science Foundation Ireland, the Health Research Board and several industry supporters.

Key Awards in 2020

- Dr Jaythoon Hassan: Winner, Irish Laboratory Award, Laboratory Scientist of the Year, 2020

Key Grants in 2020

- Dr Michael Carr – Co PI: SFI-funded Irish coronavirus sequencing consortium (ICSC)
- Dr Jaythoon Hassan – Co PI: Temple Street Foundation Children’s University Hospital €261,280
- Dr Jaythoon Hassan – Collaborator: UCD Wellcome Trust ISSF –Clinical Primer Scheme €52,018
- Dr Jaythoon Hassan – Co PI: SFI COVID Rapid Response Call €122,979
Established in 2007, the Centre for Human Reproduction at the Coombe Women and Infants University Hospital has focused on multidisciplinary research with two main themes, maternity services research nationally and modifiable risk factors for pregnancy. These include maternal obesity, gestational diabetes mellitus, infection and sepsis, suboptimal folic acid supplementation, smoking and aberrant fetal growth.

**Centre news in 2020**

- In the last year, Dr Ciara Reynolds was awarded her PhD for her thesis on maternal smoking during pregnancy. Apart from a number of peer reviewed publications, Ciara’s research received considerable attention on national radio and in the media, both print and social. Furthermore, her research is cited in the National Clinical Effectiveness Committee’s (NCEC) new national guidelines on smoking cessation which are due to be published soon. Ciara’s research on the carbon monoxide breath (BCO) test was key to the proposed recommendation on offering a BCO test to all women at their first antenatal visit to identify persistent smoking. As well as being in the maternal interest, this potentially can prevent intrauterine fetal growth restriction and improve fetal outcomes. It is a good example of translating scientific research quickly into clinical practice.

- Also during the year, Dr Eimer O’Malley submitted her PhD on the diagnosis of gestational diabetes mellitus (GDM). To date there have been 11 peer reviewed publications and the findings have implications for the development and revision of future national guidelines. Eimer’s research has also received widespread media coverage and her findings on point of care (POC) capillary glucose measurements for selective screening with an Oral Glucose Tolerance Test (OGTT) published in the high impact laboratory medicine journal Clinical Chemistry was the subject of editorials in both Clinical Chemistry and the high impact Diabetes Care.

- The Centre continued its collaboration with Dr Léan McMahon, Project Manager in the National Women and Infants Programme Office on the Irish Maternity Indicator System (IMIS) Report which has already been published and disseminated for 2019. Ireland is the first country in the world to publish such a comprehensive, contemporary report on a blend of 40 different outcomes from all the maternity units in the country which can inform hospital management as well as the general public and healthcare professionals. Hospitals can benchmark their annual performances against their own previous performances and against other hospitals nationally. The highlights of the most recent report was carried on the front page of the Irish Times.
UCD Perinatal Research Centre, based at the National Maternity Hospital, Dublin, coordinates national and international collaborative research in maternal health and its impact on maternal and infant outcomes. Led by Centre Director Professor Fionnuala McAuliffe, UCD Perinatal Research Centre is internationally recognised for its research in maternal and fetal health, diabetes and nutrition in pregnancy, and impact of maternal health on long-term health of Mum and infant.

The Centre comprises researchers with backgrounds ranging from clinical obstetrics, paediatrics, nutrition, exercise physiology, behaviour and marketing, public health to health economics. The research is funded by grants from Health Research Board Ireland, Science Foundation Ireland, the European Union, the National Children’s Research Centre, and the National Maternity Hospital Medical Fund.

**Key Awards in 2020**

- UCD Research Impact Case Study Competition – Finalist runner up – Prof. Fionnuala McAuliffe – Oct 2020
- Research prize for oral presentation at UCD Conway Festival – Anna Delahunt – Oct 2020
- First prize oral presentation at the UCD Translational Medicine Research Seminar – Anna Delahunt – April 2020
- BMFMS medical student prize awarded – Cara Yelverton

**Key Grants in 2020**

- Dr Sharleen O’Reilly a PI in the centre, was awarded EU Horizon Euro €4,000,000 for Bump to Baby and Me, a multicentre research programme on the identification of women at risk of gestational diabetes in early pregnancy and the validation of a multifaceted life coaching supported by app during pregnancy and up to 1 year postnatally to reduce risks of diabetes and weight gain.
- Prof McAuliffe was awarded a €270,000 research grant from the National Children’s Research Centre to study childhood cardiometabolic health with the ongoing ROLO Pre-Teen study, a longitudinal birth cohort study in which the children are now aged 10 years. This exciting project started with 800 pregnant women participating from early pregnancy (ROLO study – Randomised cOntrol trial of a Low glycaemic index diet in pregnancy to prevent macrosomia). The ROLO Kids longitudinal follow up study occurred when these children were aged 5 years and we are currently recruiting at the 10 year follow up stage.

**Centre news in 2020**

We are delighted to announce that a free-to-access mobile app for pregnant women will be launching at the end of 2020. This app, Holestic, consists of healthy, evidence based nutritional advice and was originally employed as part of the PEARs (Pregnancy Exercise and Nutrition Study with Smartphone Application Support) randomised controlled trial.

We have an established ROLO Families Advisory Committee, consisting of a self-selected group of parents from the longitudinal follow-up of the ROLO study. This richly informative collaboration between participants and researchers has been integral to shaping the research agenda within the Perinatal Research Centre. Building on the success of this committee we have in 2020 launched the ROLO Pre-Teen Advisory Committee, consisting of the ROLO pre-teens and their older siblings. We are excited to hear directly from these young participants about what they identify as important and interesting aspects of health.
The UCD Centre in Translational Oncology (UCTO) consolidates and gives a unified identity to cancer research across basic and clinical academic staff affiliated to UCD (~80) who are dedicated to foster excellence in cancer research, with the ultimate goal of improving personalised patient treatment and care.

UCTO membership spans across two UCD Colleges (College of Health and Agricultural Sciences (CHAS) and the College of Science), five UCD Schools (School of Medicine, School of Veterinary Science, School of Public Health Physiotherapy and Sports Science, School of Nursing Midwifery and Health Systems, School of Biomolecular and Biomedical Science, affiliated institutes (for example UCD Conway Institute, Systems Biology Ireland and UCD Hospital Cancer Centres of Excellence/affiliated teaching Hospital sites (including Saint Vincent’s University Hospital (SVUH), the Mater Misericordiae University Hospital (MMUH) and Our Lady’s Children’s Hospital Crumlin (OLCHC). These hospitals represent 3 of the 9 designated cancer centres of excellence in Ireland. The amalgamation of this critical mass of clinical and research expertise in the UCTO, continues to foster multidisciplinary research and collaboration into the future, to the benefit of increasing knowledge about cancer and enhance patient care across all ages and cancer types.

The UCTO has established channels of communication with patients, through clinical members, and through the director’s (AMcC) additional role as Chair of the Patient Voice in Cancer Research (PVCR) committee for which she was awarded a UCD Values in Action (VIA) award in 2019. These links give UCTO colleagues unprecedented possibilities to implicitly involve patients in the research journey from hypothesis inception to grant application and project implementation, through to public/scientific/funder dissemination. Patient involvement is a key strategic vision for UCTO.

UCTO was approved in February 2017 and officially launched by Professor Cecily Kelleher (CHAS Principal) and UCTO Director 21st September 2018.

Key Grants in 2020

- 19 New awards internally funded:- €2,226,015
- 45 New awards externally funded:- €12,941,001
- DevelopMed MSCA for 12 postdocs in precision oncology (Kolch et al.,)
