Veterinary Medicine

Session 2004/05

**Dates of Terms for MVB Course
Session 2004/2005**

				Semester 1:
Michaelmas Lecture Term	16 September	–	08 December	12 weeks
Examinations	09 December	–	15 December	1 week

				Semester 2:
Hilary Lecture Term	10 January	–	12 March	9 weeks
Break	14 March	–	02 April	3 weeks
Trinity Lecture Term	04 April	–	23 April	3 weeks
Revision	25 April	–	01 May	1 week
Examinations	03 May			

Easter Sunday: 27 March 2005

Autumn Repeat Examinations: 08 August 2005

Certain Final Year Clinical Rotations are available from 31 May 2004

Timetables

Timetables of lectures, practicals, tutorials etc. will be available at the commencement of the session from the departmental offices.

Faculty of Veterinary Medicine Office

Room 202, Veterinary Medicine Building

Telephone: +353-1-716 6100

Fax: +353-1-716 6104

e-mail: Barbara.Clarke@ucd.ie

Web: <http://www.ucd.ie/vetmed/>

Dean of the Faculty:	Professor Boyd R Jones
Associate Dean (Teaching and Learning):	Dr Michael L Doherty
Associate Dean (Research):	Dr Grace Mulcahy
Senior Faculty Administrator:	Ms Barbara A. Clarke
Student Advisors:	Rev Cecil Bryan (Chaplain) Rev John McNerney (Chaplain) Ms Colleen Blaney

Heads of Academic Departments

Veterinary Anatomy	Professor Stephen Carrington
Veterinary Physiology and Biochemistry	Professor Alan Baird
Animal Husbandry and Production	Dr Mark Crowe
Veterinary Microbiology and Parasitology	Dr Bryan Markey
Veterinary Pathology	Dr Joseph Cassidy
Small Animal Clinical Studies	Dr Carmel Mooney
Large Animal Clinical Studies	Professor Michael Monaghan
Veterinary Surgery	Professor Chris Bellenger

Academic Advisory Meeting

Faculty Advisory Session – First Year	10.00 Monday 13 September 2004
First day of lectures	Thursday 16 September 2004

Degree of Bachelor of Veterinary Medicine (MVB)

General Information

- 1 This degree enables the holder to be registered on the Register of the Veterinary Council of Ireland. Only persons so registered are entitled to practise as veterinary surgeons in the Republic of Ireland. Holders of this degree, provided they are EU nationals, are also, under the EU Directives, entitled to register and practise in the United Kingdom and in all other EU countries.
- 2 The programme of study for the degree extends over a period of five years. Courses are taken at the Faculty of Veterinary Medicine, University College Dublin, Belfield; and at the University farm at Lyons Estate, Newcastle, Co. Dublin.
- 3 The number of new entrants to the First Veterinary Medicine Year will be limited. As the number of applicants far exceeds the number of places available, places are offered strictly on the basis of academic achievement.
- 4 Students intending to proceed to this degree must comply with the regulations regarding entry to the University.
- 5 Students are required to become proficient in the handling and management of a variety of animal species and are allocated an appropriate programme of farm and companion animal experience up to a maximum of ten weeks, following interview. This experience should be obtained between the Christmas vacation of the first veterinary year and the end of the Easter break of the second veterinary year. Students are designated a staff supervisor who approves the farm or animal facilities proposed. The completion of this requirement to the satisfaction of the student's supervisor is a prerequisite for passing the Animal Husbandry and Production examination.
- 6 Students are required to have passed the University Examinations in full before being permitted to proceed to the courses of the following year. The University Examinations will be held in the Summer and Supplemental Examinations will be held in the Autumn for those students who fail in the Summer and for those students who have special permission from the President. Students who fail a Supplemental Examination will be interviewed by the Faculty's Student Progress Committee.
- 7 Each University Examination must be passed within two years of the date of entry to the course for that examination. Students who obtain a pass mark in the First Veterinary Medicine Examination in one subject in the Summer will be exempt from further examination in that subject in the Autumn examination of the same year. Students who fail in either subject in the First Veterinary Medicine Examination must present in both subjects at the next attempt. A candidate who fails with less than 40% in both subjects in the Autumn examination will be excluded from the course.

In special circumstances, i.e. on the grounds of ill health or for some other grave reason, the Faculty may recommend the extension of the one-year rule and of the two-year rule.

- 8 Students who do not pass one or more subjects of the University Examinations may be required to re-attend courses before being permitted to present for the examination in the following Summer.
- 9 Students who fail the Final Veterinary Examination in the summer may be required to attend the University Veterinary Hospital prior to taking that examination in the Autumn of that year.
- 10 (i) During the third, fourth and fifth years of the course, students are required to complete a minimum period of 24 weeks of practical extra-mural experience. This experience is to be spread over the three years as follows:
- | | |
|--|--|
| Third year (Christmas, Easter and Summer vacations) | 8-10 weeks suggested (clinical) |
| Fourth year (Christmas, Easter and Summer vacations) | 10-12 weeks (clinical)
2 weeks (meat plant) |
| Final year (Christmas and Easter vacations) | 2-4 weeks (clinical) |
- (ii) Students are assigned to a Clinical Tutor in third year. The 24 clinical weeks* to be spent with practising veterinary surgeons should include a minimum of:
- 2 weeks equine practice
 - 4 weeks small animal practice
 - 6 weeks farm animal or mixed practice.
- (iii) The remainder of the time can be spent in practices, hospitals, laboratories, District Veterinary Offices (DVO), etc. selected by the individual student and approved in advance by the Faculty.
- (iv) Each student will spend two full weeks in an approved meat plant and one full week in a PDSA Centre.
- (v) Up to 6 weeks may be spent overseas (up to 15 weeks with the approval of the Chair of the Clinical Division).
- (vi) Certification of Attendance:
For each placement a progress sheet (Form PS/100) must be signed by the senior supervising veterinary surgeon certifying that a specified period of study has been completed and submitted to the Faculty Office as soon as possible after the end of the placement.
- 11 Students are required to attend their practicals and clinics. Failure to do so without satisfactory explanation to the Head of the Department will be notified to the Registrar. A student whose attendance, after formal warning by the Registrar, continues to be unsatisfactory, may be debarred by the Academic Council from presenting for examination.

* A week is between 5 and 7 days, dependent on the normal working week of the practice/establishment.

Examination Subjects MVB

	ECTS Credits
First University Examination in Veterinary Medicine

Courses of Instruction for the Degree of MVB

First Year

Year Coordinator: Mr. George Hilton

AHP 2050

Animal Husbandry and Production

(Course Coordinator: Professor J F Roche)

The course in Animal Husbandry and Production consists of a series of introductory lectures in Semester 1 and a series of practical classes carried out in Semester 2 both at the Veterinary School and Lyons Research Farm to facilitate student learning of appropriate procedures to approach, handle, restrain and carry out routine chores on food producing, equine and companion animals. This material is examined in the latter part of the second year course.

VAN 1010

Veterinary Anatomy I (including Histology and Embryology)

(Course Coordinator: Mr George Hilton)

The anatomy course relates the structure and development of mammalian body form to its function. The course is based around the comparative anatomy of the principal domestic species, and adopts a topographical and systematic approach. Gross anatomy practicals are based around the dissection of the dog, horse, and ruminant species. Examples of material from other species are also provided. Histology practicals cover the microscopic structure of cells and tissues. These are also structured around the major body systems. The course emphasises the anatomy of greatest clinical and pathological relevance. It includes examples of radiographic images, and brief examples of pathological conditions in which abnormalities of anatomy are found. In the first year, it comprises 3 modules:

- 1 An introduction to basic anatomy (including embryology), cells, and tissues.
- 2 The comparative anatomy, development, and histology of the thorax and its related organs.
- 3 The comparative anatomy, development, and histology of the abdomen and pelvis and their related organs.

VPB 1020

Veterinary Physiology and Biochemistry I (including Chemistry, Applied Biophysics and Molecular and Cell Biology)

(Course Coordinator: Dr Jane Irwin)

The course consists of eight lectures per week. Practicals include laboratory work, computer-aided learning, study group activity and tutorials for one period per week throughout the year.

The veterinary physiology and biochemistry course extends over two semesters, and provides a general introduction to physiological and biochemical processes, with emphasis on the physiology of domestic animals. A course in molecular and cell biology, including some genetics, is a component of this course and is integrated with veterinary anatomy. A course in veterinary applied biophysics is presented, comprising 24 hours of lectures and 6 hours of tutorials.

VAN 0000

Veterinary Information Technology and Computing

(Course Coordinator: Mr Eamonn Fitzpatrick)

This course is delivered by the Department of Veterinary Anatomy, with the assistance of the computing services. It is intended as a practical introduction to computing, information management, and the use of computers in presenting information. There will be seven sessions of 2 hours duration. The skills acquired in this course will be required for many aspects of learning and computer use throughout the undergraduate course.

VAN 2040

Applications and Integration (Problem Based Learning)

(Course Coordinator: Dr Deirdre Campion)

This course involves the use of cases or problems on which students work in groups. Each problem stimulates small group discussion and student research on the basic and clinical sciences relevant to that problem. The problems require an inter-disciplinary approach and the students commence the process of applying and integrating their knowledge to solve them.

The first year examination marks will be carried forward to form part of an aggregate mark for this subject in second year.

LACS 3040

Veterinary Statistics

(Course Coordinator: Professor Simon More)

The course in Statistics deals with the collection and analysis of data relevant to the epidemiological investigation of disease and the interpretation of biological data of veterinary relevance.

Second Year

Year Coordinator: *Dr Deirdre Campion*

VAN 2010

Veterinary Anatomy II (including Histology and Embryology)

(Course Coordinator: *Dr Michael Dore*)

The second year course in veterinary anatomy completes the regional approach to the study of comparative anatomy in domestic animals begun in first year. The comparative anatomy of the head is covered including its overall development and the development of particular structures within the head. The histology of these structures is also studied. This is followed by a course on the functional anatomy of the limbs with particular emphasis on athletic species. The second half of the second semester is devoted to courses on radiographic anatomy and imaging, and the anatomy of exotic animals. The latter is presented in a self-learning format with students carrying out projects under supervision, and exchanging information.

AHP 2050

Animal Husbandry and Production

(Course Coordinator: *Mr Vivian Gath*)

This course consists of lectures, tutorials, laboratory and companion animal practical classes given at Belfield and farm animal practical classes which take place at the University Research Farm at Lyons. The aim of the course is to cover the basic components of animal husbandry and production and give the students current practical knowledge and recommendations on how to breed, house and manage farm and companion animals. In formal lectures and tutorials emphasis is placed on understanding the principals of genetics, nutrition, behaviour, reproduction, welfare and practical aspects of the husbandry of farm and companion animals. Alternative farming systems are also covered, as are economics and welfare implications of the management of all species. Laboratory sessions deal with the use of modern diagnostic techniques in genetics, nutrition, reproduction and dairy technology to help solve practical problems at farm level. Animal practical classes involve identification of horses, determination of reproductive status of farm animals, husbandry factors contributing to mastitis and investigating the behaviour, care and welfare of farm and companion animals. Tutorials are focused on assessing animal performance and health. Visits are made to specific farms to help the student evaluate the efficiency of management, determine their strengths and weaknesses, and make practical recommendations on how to improve efficiency.

Veterinary Physiology and Biochemistry II

(Course Coordinator: *Dr Deirdre Campion*)

The course will consist of four lectures per week in the first semester and three per week in the second semester. Practicals include laboratory work, computer-aided learning, study group activity and tutorials for one period per week throughout the year.

The basic material given during veterinary physiology and biochemistry I provides a foundation for veterinary physiology and biochemistry II. Students are expected to integrate their knowledge and understanding into their second and subsequent years. This course develops the systemic topics, which were introduced during the first year of the course. Pharmacology is introduced as part of this course, building on and complementing the student's physiological and biochemical knowledge.

Applications and Integration (Problem Based Learning)

(Course Coordinator: *Dr Deirdre Campion*)

This course is a continuation of the first year programme and uses clinical cases and problems on which students work in small groups.

Physical Examination and History Taking

(Course Coordinator: *Professor Michael Monaghan*)

This short course will introduce students to the principles underpinning professional veterinary conduct, clinical diagnosis based on history taking and clinical examination, and the recording and use of the veterinary medical record. Students will engage in exercises to equip them to accurately obtain and record a patient history and to conduct and record physical examinations of dogs, cats, horses and cattle using a problem based veterinary medical recording system. Particular attention is paid to the physical examination and examination of the bovine reproductive tract in teaching sessions on the UCD Lyons Estate Farm. A module in client-communication skills forms an integral component of the course.

Third Year

Year Coordinator: Dr Nola Leonard

Veterinary Microbiology

(Course Coordinator: *Dr Nola Leonard*)

The course deals with micro-organisms pathogenic for animals, the diseases they produce and their public health significance. The course comprises lectures, tutorials, problem

based learning sessions and practical classes. In the first semester, the lecture course covers the following topics:

- General principles of veterinary bacteriology, mycology and virology.
- Introduction to the infectious agents which cause disease in animals including bacteria, fungi, viruses and prions.
- For each infectious agent of veterinary importance, an overview is given of the characteristics of the organism, taxonomy, major epidemiological and pathogenic features, diagnosis and control.
- Important exotic diseases.
- Disease control including control of exotic diseases and important aspects of disinfection.

Student carry out practical procedures relevant to veterinary microbiology including:

- Bacteriology: Microscopy, culture, use of biochemical tests for identification, sterilization and disinfection, antibiotic susceptibility testing.
- Mycology: microscopy, culture, identification.
- Virology: tissue culture, growth of viruses, egg inoculation, haemagglutination, immunofluorescence.

In the second semester the course deals with infectious agents, which cause diseases of the haemolymphatic, cardiovascular, respiratory and central nervous systems, and of the skin and mammary gland. Emphasis is placed on the relationship between pathogenic mechanisms and clinical signs of disease, epidemiology, diagnosis and control of the agents relevant to each system.

VMP 3020

Veterinary Parasitology

(Course Coordinator: Dr Grace Mulcahy)

The aim of the course is to enable students to acquire an understanding of parasitic diseases of animals and their public health significance. Lectures, seminars and tutorials over two semesters deal with diseases caused by helminths, arthropods and protozoa.

- The epidemiology, together with pathogenesis, economic importance, diagnosis and control of parasitic diseases are presented.
- In practical classes, students carry out routine laboratory diagnostic techniques and learn to recognize parasites of clinical importance.
- In tutorials, small groups of students are encouraged to consider contemporary problems in parasitology and to discuss them in an independent and critical manner.
- Individual students are assigned a project on which they make a presentation to the seminar group.

In the second semester the course deals with the infectious agents which cause diseases of the haemopoietic, cardiovascular, respiratory and central nervous systems, and of the skin and mammary gland. Emphasis is placed on the relationship between pathogenic mechanisms and clinical signs of disease, epidemiology, diagnosis and control of the agents relevant to each system.

Veterinary Pathology I

(Course Coordinator: Dr Joseph Cassidy)

This course encompasses general pathology in companion and farm animals. Lectures are supplemented by practical classes and demonstrations in gross, microscopic and clinical pathology. The course is designed to give the student a thorough understanding of disease mechanisms.

This course consists of lectures and tutorials in medicine of the different body systems with emphasis on pathophysiology, clinical signs of organ dysfunction, diagnostic methods, diagnosis and principles of treatment of diseases of companion animals (dogs, cats, birds and others).

An integrated course in systemic and clinical pathology is given over the two semesters of the third year. Lectures and laboratory practicals are supplemented by tutorials and demonstrations. Morphological and pathophysiological aspects of disease are related to clinical findings. The course is closely co-ordinated with the diagnostic service provided by the Department of Veterinary Pathology.

Practical instruction in laboratory medicine demonstrates clinical laboratory techniques applied to specimens submitted from animal patients. Results are interpreted and discussed.

In the second semester the course deals with the pathology of diseases of the haemopoietic, cardiovascular, respiratory and central nervous systems, the skin and the mammary gland.

SACS 3050**Small Animal Clinical Studies I**

(Course Coordinator: Mr Ruaidhri Breathnach)

This course consists of lectures and tutorials in medicine of the different body systems with emphasis on pathophysiology, clinical signs of organ dysfunction, diagnostic methods, diagnosis and principles of treatment of diseases of companion animals (dogs, cats, birds and others).

Body systems/topics covered include:

- Diseases of the haemopoietic system
- Diseases of the cardiovascular system
- Diseases of the respiratory system
- Diseases of the central nervous system
- Diseases of the skin and mammary gland.

Large Animal Clinical Studies I

(Course Coordinator: Dr Kevin Dodd)

The course in large animal clinical studies given in the third year consists of lectures, tutorials and practical classes on: (i) clinical methodology, hygiene and safety, (ii) veterinary epidemiology, (iii) clinical medicine including management of clinical cases.

Body systems/topics covered include:

- Diseases of the haemopoietic system
- Diseases of the cardiovascular system
- Diseases of the respiratory system
- Diseases of the central nervous system
- Diseases of the skin and mammary gland
- Toxicology
- Metabolic diseases

Veterinary Surgery I

**(Course Coordinators: Professor Chris Bellenger
and Mr Luis Campoy)**

Lectures are given in the principles of surgery, introduction to diagnostic imaging and elements of systematic surgery in small and large animals. There is a series of practical classes in aseptic surgical technique.

Body systems/topics covered include:

- Diseases of the cardiovascular system
- Diseases of the respiratory system

Veterinary Pharmacology and Toxicology I

(Course Coordinator: Dr Thomas Barragry)

This applied course presents aspects of the drug sciences most relevant to current veterinary needs. The course includes introductory lectures on: anthelmintics, insecticides, antibiotics and antibacterial drugs, antibiotic resistance, corticosteroids, nonsteroidal anti-inflammatory agents, drug residues and regulatory issues relating to drugs and residues. Lectures on drugs used for treatment of diseases of the following body systems are delivered and are complementary to body system lectures in other Third Year subjects. These body systems and subjects are the cardiovascular, respiratory, skin and mammary gland and therapeutic toxicology.

Fourth Year**Year Coordinator: Mr Micheál O'Mahony****LACS 4080****Large Animal Clinical Studies II****(Course Coordinator: Dr Lindy Vaughan)**

The fourth year lecture course in large animal clinical studies is aligned with the systems based approach dealing with epidemiology and medicine of gastrointestinal and urinary tracts, musculoskeletal, endocrine and reproductive systems. Special specific modules deal with veterinary involvement in the pig and poultry industries as well as ruminant herd/flock health programmes. The clinical reproduction course involves lectures on obstetrics and reproduction in all species. Students receive practical tuition in the University Veterinary Hospital and the Lyons Estate Research Farm.

SACS 4050**Small Animal Clinical Studies II****(Course Coordinator: Mr Ruaidhri Breathnach)**

This course consists of lectures and tutorials in medicine of the different body systems with emphasis on pathophysiology, clinical signs of organ dysfunction, diagnostic methods, diagnosis and principles of treatment of diseases of companion animals (dogs, cats, rabbits, birds and other exotics). The body systems covered will include the gastrointestinal and urinary tracts, musculoskeletal and endocrine systems and special senses. Lectures are also given in clinical nutrition, infectious diseases and behaviour.

SACS 0000**Veterinary Pharmacology and Toxicology II****(Course Coordinator: Dr David Brayden)**

The pharmacology and toxicology course will consist of lectures and tutorials linked to selected body system topics. Prominent lecture groupings comprise anaesthetic drugs, pharmacology of behaviour, anti-cancer and anti-epileptic drugs, drugs of the urinary and intestinal tracts as well as drug use in production animals relating to public health. There will be an essay project in the 2nd semester which will be examined by an open book exam as part evidence required for formative assessment. Amongst the topics addressed in tutorials are neurotransmission at ganglia and effector organs, the drug regulatory process, veterinary autonomic pharmacology and practical applications of anaesthesia. This course will be the subject of questions on the 4th Year Veterinary Public Health, and Small and Large Animal Clinical Studies Papers and is also examinable in the Final Year Examination in Veterinary Medicine.

Veterinary Infectious Diseases

(Course Coordinator: *Dr Bryan Markey*)

The course builds on the veterinary microbiology and veterinary parasitology courses presented in the third year. It deals with applied aspects of infectious diseases, in particular the relationship between pathogenic mechanisms and clinical signs of disease, epidemiology, diagnosis and control of parasitic, bacterial, mycotic, viral and prion diseases of domesticated animals. Lectures, practical classes, tutorials and problem based learning sessions over two semesters deal with veterinary public health and the infectious agents which cause diseases of the gastrointestinal tract, urogenital tract, musculoskeletal system and organs of special sense.

Veterinary Surgery II

(Course Coordinators: *Dr Sue Rackard*)

This course will mainly consist of contributions in small and large animal surgery, anaesthesia and intensive care and diagnostic imaging to the body system courses. Other topics include surgery of the special senses, oncological surgery and surgery of exotic animals. Lectures are supplemented by practical classes in gastrointestinal surgery and operative surgery of equine, bovine and canine cadavers, seminars and tutorials in anaesthesia, diagnostic imaging, bandaging in large and small animals and lameness examination in horses. Students attend clinical case presentations by final year students. Students are on rota to attend to hospitalised animals at weekends during the term.

Veterinary Public Health and Food Hygiene

(Course Coordinator: *Mr Micheál O'Mahony*)

Veterinary public health and food hygiene deals with the interaction of animal health and the wider environment, particular to human health. The course builds new skills and knowledge onto prior training in order to prepare students for roles in food safety assurance. The lecture course initially describes relevant microbiological, parasitological, pharmaceutical and environmental hazards in alignment with related disciplines. It then details the approach of veterinary public health to managing these risks followed by consideration of veterinary input to safety assurance at pre-harvest, harvest and post-harvest cases of the production of foods of animal origin. Practical classes deal with organoleptic, microbiological and biochemical appraisal of food while tutorial classes provide in-depth instruction and practical exercises. Off-site visits to food production establishments also take place.

Veterinary Pathology II

(Course Coordinator: Dr Joseph Cassidy)

A systems based course in morphological and clinical pathology is taught in an integrated fashion with related disciplines. The course spans three terms and consists of lectures, laboratory practicals, small group tutorials and demonstrations of post mortem material. Systems taught include the gastrointestinal, urinary, reproductive, musculoskeletal, endocrine and the special senses. Morphological and pathophysiological aspects of disease are related to clinical findings. Teaching material is generated by the diagnostic service provided to the University Veterinary Hospital and to external veterinary practices.

Fifth Year – Old Curriculum***Year Coordinator: Dr Anne Healy*****Small Animal Clinical Studies II**

(Course Coordinator: Mr Ruaidhri Breathnach)

The lectures in the second year of Small Animal Clinical Studies consist of problem-orientated lectures in small animal medicine. In addition, there are lectures in clinical nutrition, oncology, toxicology, geriatric and paediatric medicine. Students are supervised in small groups in the clinic and hospital where they have responsibility for the care and welfare of hospital patients. Students are rostered for out-of-hours and emergency care during term time.

Large Animal Clinical Studies II

(Course Coordinator: Dr Anne Healy)

Lectures, tutorials and practicals are given on (i) the diagnosis, treatment and prevention of diseases of cattle, sheep, horses, pigs, goats and deer; (ii) clinical reproduction in all species of domestic animals; (iii) herd and flock medicine; (iv) state medicine; (v) jurisprudence and ethics; and (vi) practice management. There are daily clinical sessions which students attend on a rota basis in small groups for instruction in the diagnosis, treatment and prevention of diseases in large animals. Clinical teaching takes place in the University Veterinary Hospital where emphasis is placed on examination of the individual animal. Teaching of herd health is performed on farms with the support of co-operating large animal veterinary practices.

Veterinary Surgery II

**(Course Coordinators: Mr Mark Glyde
and Ms Cliona Skelly)**

The course of lectures covers all the body systems in small and large animals and diagnostic imaging and veterinary anaesthesia. Teaching in case management, aseptic technique and operating room procedure, diagnostic imaging and veterinary anaesthesia is given within the University Veterinary Hospital where students assist on rotation in veterinary anaesthesia, veterinary diagnostic imaging, large animal surgery and small animal surgery. Training is supplemented by seminars and practical classes. Rostered patient care before and after classes and on weekends forms part of the learning experience.

Fifth Year – New Curriculum

Final year is essentially lecture-free with the provision of a limited number of lectures pertaining to ethics, professionalism, practice management and current legislation. The course in final year is dedicated primarily to the development of clinical proficiency and the application of knowledge in a hospital or field environment. All students in final year will complete 21.5 weeks of core rotations plus a 4-week elective period. The core rotations are provided by the Departments of Veterinary Surgery (8.5 weeks), Small Animal Clinical Studies (5 weeks) and Large Animal Clinical Studies (6 weeks). A rotation in Clinical Pathology is provided by the Departments of Veterinary Pathology and Veterinary Microbiology and Parasitology (1 week). In addition, students are rostered for one week to provide emergency cover 'out of hours' at the University Veterinary Hospital. While all core rotations will run throughout the standard academic year, rotations in small and large animal surgery and in veterinary anaesthesia will be available from 31 May 2004.

Veterinary Surgery

**(Course Coordinators: Mr Mark Glyde
and Ms Cliona Skelly)**

The Department of Veterinary Surgery provides core rotations in Large Animal Surgery, Small Animal Surgery, Diagnostic Imaging and Anaesthesia. Some of these rotations are available to students from 30 May 2004. Students are rostered in small groups for case-based learning in the University Veterinary Hospital. A surgical skills programme is provided in the first semester. This includes structured anatomical reviews and cadaver surgery.

Large Animal Clinical Studies

(Course Coordinator: Dr Michael Doherty)

The Department of Large Animal Clinical Studies provides core rotations in Large Animal Medicine, Clinical Reproduction, Farm Quality Assurance/Veterinary Public Health and Population Medicine/Epidemiology. The teaching of clinical medicine takes place in the University Veterinary Hospital where emphasis is placed on the examination and treatment of the individual animal. The emphasis for the rest of the programme is placed on preventive medicine, herd health and field investigation of herd/flock problems. This is performed on herds participating in the Herd Health Unit Dairy Monitoring Programme while 'problem' herds are identified with the co-operation of local large animal veterinary practices. In association with the Department of Animal Husbandry and Production each student will complete a Quality Assurance audit of a dairy farm.

Small Animal Clinical Studies

(Course Coordinator: Dr Carmel Mooney)

Students assigned to the Department of Small Animal Clinical studies are supervised in small groups in the University Veterinary Hospital where they have responsibility for the care and welfare of hospital patients.

Electives

The Faculty offers a number of electives each year. Subjects offered include small animal orthopaedics, applied animal behaviour/welfare, applied dairy cow nutrition, reproductive technologies, molecular diagnostics as well as research electives in anatomy, physiology, pharmacology and parasitology. The electives offered within the Faculty of Veterinary Medicine may vary from year to year and students will be informed in advance of those available in any given academic year. Alternatively, students may choose to spend additional time in core rotations or an elective may be undertaken outside the Faculty, at another Veterinary School on clinical EMS, at an outside laboratory or research institute or by attaining a vacation scholarship. The student's Clinical EMS Tutor must first approve electives undertaken outside the Faculty. Students may undertake their elective at anytime from 31 May 2004 to 23 April 2005.

Postgraduate Degrees

Degree of Master of Animal Science

Degree of Master of Science

Degree of Master of Veterinary Medicine

Degree of Doctor of Philosophy

Postgraduate Study and Research

Candidates for the degrees of MAnSc, MSc, MVM, PhD shall fulfil the University regulations and requirements regarding these degrees.

Application Procedure

The application of a candidate shall be submitted for approval, through the Dean, to the Faculty of Veterinary Medicine, by the Professor or full-time statutory academic staff member with the approval of the relevant Professor, under whose direction the student is to work.

The application shall be submitted in writing to the Dean and shall be circulated to the Research Committee prior to a meeting of the Faculty at which the application is presented for acceptance. The application shall provide information regarding:

- (a) The candidate's academic qualifications and fitness to undertake postgraduate studies;
- (b) The proposed research project and course of study;
- (c) The availability of facilities for the proposed research;
- (d) The name(s) of the supervisor(s).

Candidates from outside Ireland and Great Britain will be required to provide evidence of a satisfactory standard in English.

The names of the proposed extern examiners shall be submitted in writing to the Dean and shall be circulated, in advance, to the Faculty prior to the meeting at which the names are presented.

Degree of Master of Animal Science (MAnSc)

Admission Requirements

A candidate for the MAnSc degree, in the Faculty of Veterinary Medicine, would normally be a holder of a primary degree with First or Second Class Honours in a subject of relevance to veterinary medicine and shall present such evidence in this regard as will satisfy the Faculty.

Course Regulations

Candidates shall carry on research for a minimum period of three terms and shall take such courses as may be prescribed by the Faculty. Nine terms are allowed in which to complete the degree from the date of acceptance. Candidates who have not completed the degree within that period must re-apply to the Faculty. Candidates shall be required to take an oral examination on the subject matter of their thesis unless exempted by the examiners.

Degree of Master of Science (MSc)

Admission Requirements

A candidate for the MSc degree must have at least a Second Class Honours primary degree or equivalent.

Course Regulations

The degree of Master of Science may be awarded by thesis. Candidates shall carry out research for a minimum period of three terms. Nine terms are allowed in which to complete the degree from the date of acceptance. Candidates may be required to pass an examination on the subject matter of the thesis if the examiners so decide.

Degree of Master of Veterinary Medicine (MVM)

Admission Requirements

Holders of a degree in veterinary medicine, registerable with the Veterinary Council, shall be eligible to obtain the Degree of Master of Veterinary Medicine (MVM). The Faculty may, at its discretion, recommend that the holder of a degree in Veterinary Medicine, not registerable with the Veterinary Council, be deemed eligible to obtain the Degree of MVM.

Course Regulations

Candidates for the MVM degree shall carry on research for a minimum period of three terms. Nine terms are allowed in which to complete the degree from the date of acceptance. Candidates who have not completed the degree within that period must re-apply to the Faculty. Candidates shall be required to take an oral examination on the subject matter of their thesis unless exempted by the examiners.

Degree of Doctor of Philosophy (PhD)

A candidate for the PhD degree in the Faculty of Veterinary Medicine shall possess a degree in veterinary medicine or other appropriate qualification and shall present such evidence in this regard as will satisfy the Faculty.

Candidates shall carry on research for a minimum period of nine terms or six terms in the case of any candidate whose attainments, in the opinion of the Faculty, justify such shorter course.

Candidates are allowed six years in which to complete the degree from the date of acceptance, and if they have not done so within that period, they must re-apply to the Faculty.

Candidates shall be required to take an oral examination on the subject matter of their thesis unless exempted by the examiners.

Undergraduate Diploma

Diploma in Veterinary Nursing (VN)

Director of Veterinary Nursing: Mrs Lynne Hughes

Course Tutor: Mrs Eimear De Souza

Course Administrator: Ms Moya Ryan

In response to the interest and support of the veterinary surgeons and veterinary nurses in Ireland, the Faculty of Veterinary Medicine, UCD has developed a three-year Diploma in Veterinary Nursing. The course is based on the "block-release" principle.

Entry Requirements

Passes in six recognised subjects at Leaving Certificate, at least two of which must be Grade C3 or better on a Higher level paper.

Subjects must include

- i) Irish
- ii) English (minimum C3 Leaving Certificate Ordinary Paper)
- iii) Mathematics (minimum C3 Leaving Certificate Ordinary Paper)
- iv) Laboratory Science or Home Economics (Social and Scientific)
- v) Two other recognised subjects.

1.2 Alternate Entry

Up to ten places per year will be available for persons who have completed alternative training and/or experience but who may not have secured all the Leaving Certificate entry requirements. Normally, this route to matriculation will be open only for persons aged 23 or over on the 1st January prior to entry.

1.3 Employment

Students must have secured a minimum of twenty hours per week paid continuous employment in a UCD registered veterinary practice before application and acceptance into the course. Employment must be commenced no later than the date of the student's own registration with UCD.

1.4 Enquiries and applications for entry

Enquiries regarding practice registration and entry into the Diploma in Veterinary Nursing should be made to: Ms Moya Ryan, Veterinary Nursing Course Administrator, Faculty of Veterinary Medicine, University College Dublin, Belfield, Dublin 4.

Further details and contact telephone number are available on the Veterinary Nursing webpage: <http://www.ucd.ie/vetnursing/>

Following receipt of a detailed information pack, all applications for entry to the course should be made to the Admissions Office, UCD.

In 2004-2005 there will be a total of thirty places.

Attendance at UCD

Students are required to attend the Faculty of Veterinary Medicine for eight weeks per year, receiving an intensive course of lectures, practical classes and clinical rotation. Attendance is mandatory and any absences must be explained in writing to the Director of Veterinary Nursing. The University Veterinary Hospital caters for both large and small animals and the curriculum will incorporate nursing of small animals, farm animals, equine and exotic species.

1.5 Formal Tuition by Year

Each year, two periods of two weeks will be spent in full-time formal tuition. Further details of course outline and syllabus are available on the Veterinary Nursing webpage <http://www.ucd.ie/vetnursing/>.

First Year

Receptionist Duties

General Nursing (All Species)

Anatomy and Physiology (All Species)

Reproduction (All Species)

Medical Nursing, In-patient Care, Hospital Management (Small Animal)

First Aid (Small Animal)

Occupational Hazards, Health and Safety, Care of Equipment

Second Year

Medical Nursing, In-patient Care, Hospital Management (Small Animal)

First Aid (Small Animal)

Surgical Nursing, Anaesthesia and Theatre Techniques (Small Animal)

Exotic Species

Structure of the Profession and Ethics

Third Year

Pharmacology and Pharmacy

Laboratory Work (Clinical Pathology, Microbiology and Parasitology)

Diagnostic Imaging

Large Animal Nursing (General, Medical, Surgical, Anaesthesia and Theatre Practice)

1.6 Clinical Veterinary Nursing Rotations

Each year, two periods of two weeks will be spent on clinical veterinary nursing rotations at the University Veterinary Hospital, UCD, Dublin 4.

One of the Third Year rotations is normally taken at another centre; all proposals require prior approval from the Course Tutor. An institution where the students will be working directly with animals would be suitable. It is suggested that students use

the elective rotation to make up time in a practice of a different type from their own training practice.

First Year

Rotation 1

- 1 week small animal medicine
- 1 week small animal surgery

Rotation 2

- 1 week large animal medicine
- 1 week large animal surgery

Second Year

Rotation 1

- 1 week small animal medicine
- 1 week small animal surgery

Rotation 2

- 1 week large animal medicine
- 1 week large animal surgery

Third Year

- 1 week diagnostic imaging
- 1 week laboratory work
- 2 week elective rotation (see above)

Assessment

1.7 Formal Examinations

Formal examinations take place at the end of each academic year. The examinations for each year reflect the content of the portfolio, rotation duties and the modules of the course to be studied in that year.

General Regulations

- Examinations will be held in Summer (Years 1 and 2: mid-June, Year 3: early May)
- Supplemental examinations will take place in Autumn (mid August) if required
- Pass standard is 50%
- All five parts of the examinations must be passed before proceeding to the next year of the programme
- The examination for each year of the programme should normally be passed within two years of entering that year.
- The Diploma may be awarded with distinction on an aggregate of 70% of the marks obtained over the three years of the course. A distinction will be awarded only when each examination is passed at the first attempt and when subjects are passed together.

1.8 Portfolio of Veterinary Nursing Experience

Students must complete and pass a portfolio of their veterinary nursing experience, presenting required written work for assessment during the academic year (end of

January) and at the end of the academic year (mid-end April). The Course Tutor gives instruction on completion of the portfolio to all students in Year 1.

1.9 Clinical Veterinary Nursing Rotations

Students will be assessed on their performance by qualified veterinary or nursing staff in the University Veterinary Hospital and by the Course Tutors on completion of both written and oral case presentations.

1.10 Allocation of Marks

		ECTS Credits
First University Examination in Veterinary Nursing		
VNUR 1001	Veterinary Nursing Theory and Practice IA	4
VNUR 1002	Veterinary Nursing Theory and Practice IB	4
VNUR 1003	Veterinary Nursing Theory and Practice I	2
VNUR 1004	Portfolio of Veterinary Nursing Experience	6
VNUR 1005	Clinical Veterinary Nursing Rotations	4
Second University Examination in Veterinary Nursing		
VNUR 2001	Veterinary Nursing Theory and Practice IIA	4
VNUR 2002	Veterinary Nursing Theory and Practice IIB	4
VNUR 2003	Veterinary Nursing Theory and Practice II	2
VNUR 2004	Portfolio of Veterinary Nursing Experience	6
VNUR 2005	Clinical Veterinary Nursing Rotations	4
Third University Examination in Veterinary Nursing		
VNUR 3001	Veterinary Nursing Theory and Practice IIIA	4
VNUR 3002	Veterinary Nursing Theory and Practice IIIB	4
VNUR 3003	Veterinary Nursing Theory and Practice III	2
VNUR 3004	Portfolio of Veterinary Nursing Experience	6
VNUR 3005	Clinical Veterinary Nursing Rotations	4

Additional Requirements

1.11 Checklist of Practical Tasks

A checklist of practical tasks is issued to students. Each student must carry out all of these tasks and have these procedures certified by a veterinary surgeon or qualified veterinary nurse who was present at the time when the task was performed. No marks are awarded for the checklist of practical tasks since it is simply a record of procedures that have been carried out. The checklist of practical tasks must be submitted annually for inspection (Years 1 and 2: mid June, Year 3: early May). Failure to receive the checklist in the Faculty Office by the due date or to complete the majority of the tasks, without sufficient cause may mean the student will not be permitted to sit the end-of-year examinations.

1.12 Record of Employment

Students need to work in veterinary practice to obtain appropriate learning experience. The student must secure paid employment of at least 20 hours per week

in a UCD-registered practice. Over the three-year period of the course, the student must complete a total of 2000 hours of paid employment in a UCD-registered practice, with a minimum of 500 hours in any academic year.

The student will need to have a Record of Employment card (provided by UCD) completed and signed by the practice principal, to prove that these hours have been spent in employment in a registered practice in each academic year. Failure to submit the card to the Faculty Office by the due date (Years 1 and 2: end of May, Year 3: end of April) or to achieve the required minimum number of hours required for each year, without appropriate cause may mean the student will not be permitted to sit the end-of-year examinations.

Only time spent in active employment is allowable for the Record of Employment. There is no allowance for the period spent in the University Veterinary Hospital, annual leave from a veterinary practice or absences due to illness.

Please note: If the number of hours worked over the entire period averages greater than 48 hours per week, a maximum of 48 hours per week is allowable towards the record of employment.

Scholarships and Prizes Awarded

Undergraduate Scholarships

University College Dublin awards one scholarship of €635 on each of the first, second, third and fourth university examination in veterinary medicine.

Postgraduate Scholarships

University College Dublin awards approximately thirty postgraduate scholarships to students undertaking higher degrees by major thesis. The number available for the Faculty of Veterinary Medicine is two (See *Student Awards booklet for application procedure*).

Scholarships, Prizes and Medals from Trust Funds and Other Sources

Alexandra Colquhoun Scholarship in Veterinary Medicine

A scholarship, of the annual value of €4,444 approximately, has been established by bequest to the University. The scholarship is intended to enable the holder to pursue the degree course in Veterinary Medicine under the following conditions as laid down by the will of the donor:

- 1 The candidate must be a female student.
- 2 The candidate must be an Irish citizen resident in the Republic of Ireland, whose parents also were citizens of the Republic of Ireland at the time of her birth.
- 3 The candidate must be a person who, without the benefit of the scholarship, would be unable to afford to pursue courses at the University to enable her to qualify as a veterinary surgeon.

John Freeman Memorial Medal

This medal is awarded at graduation to the candidate who, at his/her first sitting at the University Examinations in Veterinary Medicine, acquires the highest aggregate marks in the following subjects: Animal Husbandry and Production, Microbiology, Parasitology, Pathology and Pharmacology.

John Hannan Medal

This medal is in recognition of the contribution to Veterinary Public Health made by Professor John Hannan, former Dean of the Faculty of Veterinary Medicine, University College, Dublin (1984-1990). Professor Hannan played a leading role in the development and promotion of Veterinary Public Health and was a leading proponent of the discipline at national and international level. He was a member of the inaugural Board of the Food Safety Authority of Ireland, Vice-President of the World Association of Veterinary Food Hygienists and was a Consultant in Food Hygiene to the World

Health Organisation. He served on numerous other consultative bodies on veterinary education and related matters.

The John Hannan Medal is awarded annually to the student who, having passed the relevant University Examination, obtained the overall highest marks in Veterinary Public Health and Food Hygiene.

Thomas Henry Foundation

This trust provides financial assistance in the Sciences and practice of Agriculture, Horticulture and Veterinary Medicine to persons born, or ordinarily resident, in Northern Ireland.

In the case of postgraduate students undertaking research in the designated areas, application is made by the University on behalf of a student. A detailed proposal of the research project to be undertaken must be submitted.

In the case of undergraduate students, who must have been born or be ordinarily resident in Northern Ireland, application may be made directly to the trust before 1st July in any year to: The Secretary, Thomas Henry Foundation, 31, The Terrace, Downpatrick, Co. Down BT30 6EH, Northern Ireland.

Scholarships are awarded by the Foundation on a competitive basis.

Centenary Medal (IVA)

This medal is awarded at graduation to the candidate with the most consistently high marks throughout the course.

Professor P A McGeady Memorial Medal in Veterinary Surgery

This medal is in memory of Professor P A McGeady, Dean of the UCD Faculty of Veterinary Medicine from 1960 to 1972 and Professor of Veterinary Surgery, Obstetrics and Infertility from 1946 until his retirement in 1976. His family have established this medal as a tribute to Professor McGeady's contribution to the discipline of Veterinary Surgery at UCD, his skills in teaching and his involvement in veterinary education during a period of considerable change.

The medal is awarded annually to the candidate who obtains the highest overall mark in the professional examinations in Veterinary Surgery.

Mullaney Award in Veterinary Microbiology

This award was established by Mrs. R. Mullaney, Lecturer in Veterinary Virology (1961-1987), on her retirement from University College Dublin.

The award will take the form of a prize to be presented annually to the student obtaining the highest marks in the subject Veterinary Microbiology in the Third Veterinary Examination. The general conditions governing University awards will apply (see *Student Awards booklet*).

David O'Connor Memorial Medal – Sportsperson of the Year

This medal was established in memory of David O'Connor, a 1994 Veterinary Medicine honours graduate. David was actively involved with Gaelic football, soccer and rugby at club and university level. His enthusiasm, commitment and legendary management skills are some of the qualities this award aims to commemorate. A medal (and bursary) will be presented annually to a student in the Faculty of Veterinary Medicine who has significant success in sport.

Individual veterinary students or, in exceptional circumstances, teams may be nominated by students, staff or sports managers within UCD. Nominations must be made to the Office of the Dean of Veterinary Medicine before the Easter break each year.

A selection committee will make a decision on the recipient of the medal and it will be presented to the winner in May of each year.

Pharmacia Upjohn Travel Grant

This award will be made to the student who obtains first place in the Final MVB Degree Examination (Student of the Year Award). The travel grant, of the value of €635 is payable to enable the candidate to observe, at first hand, veterinary and research institutions outside of Ireland. The travel itinerary is agreed by the Dean, the sponsor and the successful student.

Training Scholarships for Undergraduate Students

These scholarships which amount to €1,250 - €2,000 each to cover travel and subsistence expenses are awarded annually to second, third and fourth year veterinary students, on the recommendation of an Assessment Committee based on an interview and the candidates' performance in their courses. The scholarships are designed to allow the successful students to work in renowned research laboratories where they can actively engage in some innovative investigation of interest to the livestock and other related industries. They are normally awarded to cover work done during the summer vacation.

Two scholarships are available, one donated by the Veterinary Council Education Trust Fund and one by Intervet (Ireland) Limited.

Wellcome Studentship

Each year the Animal Diseases Research Association (Moredun Research Institute) seeks funds (approximately €889 per student) from the Wellcome Trust to enable selected veterinary students to carry out supervised research projects over eight weeks of the summer vacation. Third and higher year students are eligible to apply to the Selection Committee for these awards.

Moredun Foundation Prize

This prize is awarded to the final year student who performs best in the area of farm animal studies. The award consists of a personalised certificate; a copy of the diseases of

sheep book signed by the editors, Professor Ian Aitken and Dr Bill Martin; a complete back catalogue of the technical animal health news sheets produced by the foundation and a year's free membership of the Moredun Foundation.

Ferranti Scholarships

In late 1997 Mr. Philip Ferranti MEd, of Palm Desert, California, USA, decided to support two students to undertake projects of special interest to them with a contribution of approximately US\$3,000. These scholarships are available to third and fourth year students (divided between male and female students). In December of each year students are notified regarding these scholarships and those applying are requested to submit a proposal on how they would use the scholarship to further their extra-mural experience and how this experience would enhance the achievement of their career goals. The proposals should not exceed 500 words in length. The Dean's Selection Committee considers the proposals submitted and makes the awards. Copies of the proposals of the award-winning students are sent to Mr. Ferranti together with a photograph of the student and a final report is sent at the end of the project.

Alameda East Veterinary Hospital

Dr Kevin T. Fitzgerald, PhD, DVM, Diplomate ABVP (Canine/Feline) together with the other partners of Alameda East Veterinary Hospital, Denver, Colorado, USA offer a place to one fourth year student for three-four weeks in the Summer. This is a 22-man practice with 13 general practitioners, 9 board certified specialists in surgery, internal medicine, radiology, neurology, dermatology and general practice. The hospital is open twenty-four hours a day, 365 days a year and sees hundreds of emergencies each month. This hospital has also featured on television cable channel "Animal Planet". The practice will provide the student with travel from Ireland and accommodation while at the hospital. *(Not available in 2004)*

ESVP 2003 Medal in Veterinary Pathology

This medal was established to commemorate the 21st Annual Meeting of the European Society of Veterinary Pathology (ESVP) held in Dublin in September 2003. The medal is awarded annually to the student who obtains the highest overall mark in the professional examinations in Veterinary Pathology.

ESVP 2003 Bursary in Veterinary Pathology

This bursary was established to commemorate the 21st Annual Meeting of the European Society of Veterinary Pathology (ESVP) held in Dublin in September, 2003. An award of €500 is available annually for ten years to support an undergraduate student who wishes to spend up to six weeks during vacation working in the Veterinary Sciences Division, Department of Agriculture and Rural Development, Stormont, Belfast. The award is open to students in the Third and Fourth veterinary years.
